IDEA ANALYTICS DIGITAL TRANSFORMATION SERIES

ABOUT THIS DOCUMENT

This document was developed as part of IDEA Analytics' ***Digital Transformation Series: DFR Programs***. IDEA Analytics supports strategic and informed decision making by organizations seeking to use technology to advance their services for their communities. The use of technology produces a variety of challenges in acceptance, implementation, and management. This document, and others in the series are designed to manage the changes that occur within organizations, communities, and individual careers.

This document was compiled and resource access confirmed in October 2025, although in the digital age of information, the links included may not work. Regardless, information on source, title and content is provided to facilitate additional researcher. This document is not inclusive of all available research, as there are other means to find those details. However, the 108 resources within are defined as regulatory, research, and leading information on best practices.

All 108 resources are grouped into sections, listed alphabetically, to assist with research and information discovery for users. This document is independent on allowance or restriction of this type of technology, and only seeks for individuals and organizations to make informed decisions as they seek to develop, refine, or cease operations of UAS for their communities.

Questions on this document or our Digital Transformation Series: DFR Programs, please reach to IDEA Analytics (hover for link).
